

Climate Outlook September - October 2022

SOI TRACKER:

The monthly average SOI for August was positive 8.81 (+8.81) compared to positive 7.63 (+7.63) in July. Therefore the SOI phase for August came out as "Consistently Positive".

	SOI VALUE	SOI PHASE
End of September 2021	9.19	"Consistently Positive"
End of October 2021	7.66	"Consistently Positive"
End of November 2021	11.73	"Consistently Positive"
End of December 2021	12.99	"Consistently Positive"
End of January 2022	2.65	"Consistently Positive"
End of February 2022	7.39	"Rapidly Rising"
End of March 2022	11.93	"Consistently Positive"
End of April 2022	20.01	"Consistently Positive"
End of May 2022	18.56	"Consistently Positive"
End of June 2022	15.7	"Consistently Positive"
End of July 2022	7.63	"Consistently Positive"
End of August 2022	8.81	"Consistently Positive"

RAINFALL OUTLOOK

- Median rainfall for September-October at Macknade is equal to 58.0 mm.
- Based on the new SOI phase, we have calculated the chance of exceeding median rainfall for September-October for the Herbert region to be 55%. (A 50% chance is what would be considered the 'normal chance' of experiencing above median rainfall).
- The Upper Quartile (top quartile of rainfall) for September-October at Macknade is equal to 104.9 mm.
- Based on past rainfall events over a period of more than 110 years, the chance of experiencing excessively high rainfall (i.e. rainfall greater than the upper quartile) is equal to 41%. (25% chance is what would be considered the 'normal chance' of experiencing excessively high rainfall.)

Climate Outlook September - October 2022

SEPTEMBER-OCTOBER RAIN OUTLOOK FOR INGHAM IN DETAIL:

Since 1892 when rainfall records commenced at Macknade, there have been 29 occasions when the SOI phase at the end of August was “Consistently Positive”. These years were:

1892 1893 1900 1909 1910 1915 1916 1917 1920 1924 1938 1947 1950
 1955 1956 1958 1960 1973 1974 1975 1981 1988 1996 1998 2010 2011
 2017 2020 2021

During those 29 years, total rainfall for September-October exceeded the median 16 times. Therefore the chance of exceeding median rainfall for September-October is $16/29 = 55\%$.

A high amount of rainfall (i.e. rain greater than 104.9 mm) resulted 12 times. So the chance of high rainfall is equal to $12/29 = 41\%$.

There have been 29 years when the SOI phase at the end of August was in a Consistently Positive phase (coloured Bars)

In 16 of those years the rainfall during Sept-Oct exceeded the median.

The chance that the Rainfall during Sept-Oct will exceed the median = $16/29 = 55\%$

In 12 of those years the Rainfall during Sept-Oct exceeded the Upper Quartile.

The chance that the Rainfall during Sept-Oct will exceed the Upper Quartile = $12/29 = 41\%$

Comparison to Last Year

	September-October 2022	September-October 2021
SOI Phase	Consistently Positive	Consistently Positive
Chance of above median rainfall	55%	54%
Chance of excessively high rainfall	41%	39%
